How to use this guide

Read it once end to end before your first outreach. Keep the Quick reference card (Section 16) open during calls. When you need to rehearse or check a number, ask Sadie. When you have a live prospect, submit the deal to deals@layeronestaging.com with the six fields in Section 12.

1. Welcome and how to use this guide

Welcome aboard. Layer One Staging sells one thing: deployment readiness. Customers ship IT equipment to our managed warehouse facility in the Dallas-Fort Worth area. We receive it, configure it, test it, tag it, kit it by site, store it, and ship finished kits nationwide so their own technicians can unbox and install.

Your job is to find organizations deploying technology across multiple locations, qualify them honestly, and start the quote. James qualifies every deal and runs pricing. You stay in the loop on every deal you bring in.

You get paid **10 percent of the full first project value**, paid by bank transfer after the customer payment clears. No base, no cap. Section 11 has the full terms.

This guide is the single source of truth for numbers and process. If it is not in here, do not guess. Ask Sadie, or ask James.

2. What Layer One Staging does

Layer One Staging is a business-to-business IT hardware staging, kitting, configuration, storage, and logistics company serving the Dallas-Fort Worth metro. The company is disabled veteran-owned. The founder, James Stogner, is a U.S. Air Force veteran with more than 20 years in IT.

The one-sentence version: we are the operational layer between equipment procurement and field deployment.

We do	We do not do
Receive, inventory, configure, and test devices	Onsite installation
Asset tagging, labeling, and QA with signed checklists	Dispatching field technicians
Kitting by site or workstation from a bill of materials	Residential work
Secure storage and nationwide shipping, plus DFW delivery	Leasing warehouse or office space to other businesses

Say it this way

"You buy the equipment. Your team installs it. We handle everything in between, so gear arrives at each site configured, tested, tagged, and kitted, ready to install."

3. The 8-step staging workflow

Every rollout runs through the same eight steps. Learn to walk a prospect through them in your own words. This process is the product.

Step	What happens	Why the buyer cares
1. Receive	Freight and parcels accepted at our dock. Every item counted, inspected, photographed, and logged.	Nothing gets lost at the door.
2. Inventory	Serial numbers and MAC addresses captured and logged in the tracking system.	They know exactly what they own and where it is.
3. Configure	Firmware updates, OS images, MDM enrollment, and baseline configs, done in staging.	Devices arrive ready, not blank.
4. Asset Tag	Asset tags and labels applied to customer requirements.	Assets are trackable from day one.
5. QA	Signed checklist on every unit. Dead-on-arrival units flagged with photos.	Bad gear is caught here, not at the site.
6. Kit by Site	Kitting by site or workstation	One box per site. No sorting on

Step	What happens	Why the buyer cares
	from a bill of materials.	location.
7. Document	Chain-of-custody tracking with photos and status in the customer portal.	Full visibility without chasing emails.
8. Ship / Deliver	Parcel, LTL, and palletized freight nationwide with tracking. DFW delivery by our trucks.	Kits land on schedule, site by site.

Practice note

Sadie will quiz you on these eight steps and on the order. Be able to say them without reading. Prospects buy confidence, and the workflow is where confidence comes from.

4. Services at a glance

Service	What it includes
Receiving and inventory control	Freight and parcel receiving, counts, inspection, photos, serial and MAC capture
Secure storage	Camera-monitored, climate-controlled storage at \$30 per pallet per month
Configuration and firmware staging	Firmware, OS images, MDM enrollment, baseline configuration
Asset tagging and labeling	Tags and labels applied to the customer specification
QA verification	Signed checklist per unit, dead-on-arrival flagging with photo documentation
Kitting	By site or workstation, built from a bill of materials
Shipping and delivery	Parcel, LTL, and palletized freight nationwide; DFW local delivery
Customer portal	Live inventory, photos, shipment tracking, invoices, documents, and messaging

If a prospect asks for a service that is not listed here, write down exactly what they need and include it in your deal submission. Do not promise it on the call.

5. Approved pricing: the only numbers you quote

Quote only these three rates. They are published, straightforward, and the same for every prospect.

Item	Rate	Notes
Receiving	\$12 per pallet	Per pallet received at our dock
Storage	\$30 per pallet per month	Secure, camera-monitored, climate-controlled
DFW local delivery	\$175 per pallet	Palletized delivery in the DFW metro
DFW local delivery	\$30 per loose device	For loose, non-palletized devices

Larger rollouts

Bigger, multi-site rollouts get a custom project quote with volume discounts. Never build that quote yourself and never invent a rate. Take the locations, device counts, and timeline, then submit the deal. James builds the quote.

Add-on services, including photo documentation, asset tagging, firmware and configuration work, custom kitting, expedited turnaround, and staging labor, are priced inside the custom quote. Do not quote them from memory.

6. Payment terms

- **No deposit required.** There is no deposit structure to explain away.
- **First payment due before receiving.** No equipment can be received at the dock until the first payment clears. This is the one hard rule.
- **Invoicing through the portal.** Customers see invoices in their customer portal.
- **Payment by secure Stripe link.** The proposal email carries the payment link. We never take card numbers by phone.

The line to use

"No deposit. Your first payment is due before gear ships to us. Once it clears, your vendors can send equipment to our dock and we take it from there."

7. What happens after a prospect says yes

Prospects always ask what happens next. Walk them through this sequence exactly. It is short, online, and fully tracked.

1. **Proposal email goes out.** After James approves the quote, the customer receives one proposal email with two links: the service agreement (MSA) signing link and the Stripe payment link.
2. **Customer signs the MSA online.** The signing link opens a secure signing page. They review and sign electronically.
3. **Customer pays.** Full payment at signing, through the Stripe link. No equipment moves until this clears.
4. **Portal invite and login.** The customer receives an invite, sets a password, and logs in to the customer portal.

5. **Onboarding checklist opens.** Inside the portal they complete account details, contacts, and delivery preferences. The account becomes fully active when the checklist is done.
6. **Site assignment, on our side.** We assign staging space and work the internal onboarding tasks. The rep does not need to explain this step, but should know it happens before gear arrives.
7. **Equipment ships to our dock.** Only now do the customer or their vendors ship equipment to us.
8. **Staging begins.** The 8-step workflow runs. The customer tracks devices, shipments, invoices, and documents in the portal.

Two sentences that close the loop

"You sign the agreement and pay online, then you get your portal login and an onboarding checklist. Once that is done, your vendors can ship to our dock and we take it from there."

Key MSA terms you should know

- **Full payment at signing.** As above, no receiving until payment clears.
- **Back-out terms.** If a customer backs out, the forfeit is the committed space cost plus a 15 percent admin fee on the remainder, net of any re-lease recovery. Any balance is refunded within 30 days.
- **Cost of the space** means amounts paid or contractually obligated for space reserved at the customer request.
- **Facility access.** Tours are by appointment only. No walk-in access.

Do not negotiate MSA terms. If a prospect pushes on terms, note the concern in your deal submission and let James handle it.

8. Who to sell to

Strong fit	Not a fit
MSPs and IT integrators	Residential customers
National rollout companies	Anyone needing onsite installation
Retailers and restaurant or franchise groups	Anyone needing us to dispatch field technicians
Equipment brokers and VARs	One-off home or small-office setups
Healthcare and education IT teams	
Hospitality groups and data center deployment teams	
Any organization deploying technology across multiple locations	

The pattern to hunt for: multiple locations, a deployment timeline, and equipment that has to arrive configured and ready. One location with no timeline is a weak lead. Twenty locations on a deadline is the bullseye.

Prospect targets: your starting list

You do not need to find prospects from scratch. Start with the company types below, then work the named examples. These are real organizations that match the Layer One fit: multi-location, technology-heavy, and deploying gear on a schedule. They are direction, not a call list to blast. Pick a few, learn what they do, and have a specific reason to reach out.

Before you contact any named company

Check with James first. Several companies below are already in active outreach from Layer One, and one prospect should only ever hear from one of us at a time. If James has already contacted a company, do not reach out to it separately unless he assigns it to you. Your job is to open new doors, not duplicate effort.

Start here: DFW MSPs and IT service firms

This is your highest-probability starting point. Local MSPs buy and deploy hardware for their own clients every week. When a client opens a new office, refreshes workstations, or rolls out network gear, someone has to receive, configure, and kit that equipment. That is the work you are selling. Look for firms that mention multi-location support, IT procurement, office moves, or asset lifecycle services on their website.

Company	Based in	Why they fit	What to listen for
Techmedics	Dallas, TX	Multi-location IT and full asset lifecycle management, from procurement through retirement.	New client onboarding, office openings, hardware refresh cycles.
Cloudavize	Dallas, TX	IT procurement and multi-office support for DFW clients.	Client deployments where gear is drop-shipped and configured on site.
ITECS Outsourcing	Dallas, TX	Co-managed and outsourced IT for mid-size firms, plus enterprise on-site work.	Branch rollouts, office moves, distributed-site support.
ActaMSP	Coppell, TX	Managed IT and network infrastructure across the DFW metro.	Multi-site client work needing receiving, staging, and per-site shipping.
LG Networks	Dallas, TX	IT procurement, office-move transitions, and multi-site Wi-Fi.	Office relocations and multi-property clients who need per-site kits.
Sagiss	Irving, TX	Long-running DFW MSP with co-managed IT and device provisioning.	Recurring hardware lifecycle and provisioning work. Ask

Company	Based in	Why they fit	What to listen for
			for the right contact first, do not start at the support desk.
BCA IT	Dallas, TX	Markets directly to companies expanding to multiple locations.	Growth-stage clients standardizing deployments across sites. Contact is through their website form.

How to open with an MSP: do not pitch them on replacing what they do. Position Layer One as overflow and logistics capacity. Their technicians stay billable with clients. We handle the dock, the bench, the boxes, and the freight.

Next: integrators and VARs running rollouts

Integrators and value-added resellers design and sell the technology. The physical staging is often an afterthought that eats their warehouse and their project managers. A DFW staging point gives them Texas and regional capacity without building it themselves.

Company	Based in	Why they fit	Angle
NetSync Network Solutions	Houston, TX, with Dallas office	Large-scale multi-site implementations across Texas, including campus, enterprise, and retail builds.	A Texas staging point for rollout volume.
GDT (General Datatech)	Dallas, TX	National IT integrator running multi-site technology engagements.	Regional staging and kitting capacity for Texas deployments.
Stratix Corporation	Peachtree Corners, GA	Enterprise mobility deployments and multi-site rollouts at national scale.	Position as regional capacity, not a replacement. They run their own integration center. Form or phone contact only.

National rollout and deployment partners

These firms execute rollouts for a living, across hundreds or thousands of sites. They are not buying staging for one office. They need dependable regional capacity they can hand a project to. The conversation is about capacity, reliability, and carrier handoffs, not price per device.

Company	Based in	Why they fit	Angle
Concert Technologies	Dulles, VA	Nationwide and global	A Texas staging and

Company	Based in	Why they fit	Angle
		multi-site technology rollouts at very high volume.	kitting node for regional deployments.
T-ROC Global	Coral Gables, FL	National retail rollout execution with warehouse locations across the country.	DFW staging capacity inside a national logistics footprint.
Vixxo	Scottsdale, AZ	Technology and facilities services across a very large multi-site client base.	Staging and kitting capacity for hardware-heavy rollouts.
CompuCom	Fort Mill, SC, with Dallas office	Device lifecycle services and large field organization, with a Dallas presence.	Regional capacity partner. They run their own configuration centers, so lead with overflow and Texas coverage.

Longer cycle: DFW-headquartered retail and franchise groups

These are bigger, slower opportunities. Every new store, refresh, or remodel is a technology deployment: point-of-sale, kitchen displays, networking, signage, and back-office gear, all needed per site on a deadline. Do not start here on day one. Learn the MSP conversation first. When you do work this list, expect to go through IT, facilities, or new-store development, not a public media inbox.

Company	Based in	Why they fit	What triggers a conversation
CEC Entertainment (Chuck E. Cheese)	Irving, TX	Hundreds of locations in an active brand and technology transformation.	Refresh rollouts, arcade and network upgrades, new-format openings. Has a real partnerships inbox.
7-Eleven	Irving, TX	Thousands of stores with constant point-of-sale, checkout, and back-office rollouts.	Store technology refreshes and new-store openings. Find the IT or facilities contact, not the media desk.
Brinker International (Chili's, Maggiano's)	Dallas, TX	More than 1,600 restaurants on regular refresh cycles.	Kitchen display, point-of-sale, and network rollouts across company and franchised units.
Wingstop	Dallas, TX	Fast-growing franchise	New-unit openings and

Company	Based in	Why they fit	What triggers a conversation
		system with new-unit openings and kitchen technology rollouts.	kitchen tech retrofits. Go through operations or development contacts.
Dave and Buster's / Main Event	Coppell, TX	Every venue is a heavy technology build, from POS to arcade and A/V systems.	New venue builds and retrofits.
Sally Beauty Holdings	Denton, TX	Thousands of small-format stores in a brand-wide refresh program.	Point-of-sale, networking, and signage rollouts at high site counts.
Topgolf	Dallas, TX	Technology-dense venues with new builds and retrofits each year.	New venue builds and technology retrofits.

For this group, your first job is finding the right person, not pitching the first person. Titles to look for: IT operations, store systems, facilities, construction and new-store development, and deployment or rollout managers. LinkedIn and the company directory are your tools here.

Where to find more prospects like these

Once the named list is worked, use these patterns to build your own pipeline. Every one of them is the same bet: multiple locations plus a deployment schedule equals staging work.

- **DFW MSP lists and rankings.** Managed service provider directories, MSP 501-style rankings, and local IT company lists. Filter for firms serving multi-location clients.
- **Your own network first.** Former employers, vendors, and field contacts who now work at integrators or rollout firms. A warm introduction beats a cold email every time.
- **Help-wanted signals.** Companies hiring rollout coordinators, deployment project managers, or warehouse and logistics staff are telling you their deployment volume is growing.
- **Expansion news.** Local business journals and company press releases announcing new locations, new contracts, or headquarters moves. New sites mean new gear.
- **Franchise development.** Franchise groups announcing Texas expansion or multi-unit development deals. Each new unit is a kitted technology install.
- **Vendor partner directories.** Networking and hardware vendor partner finders filtered to DFW. Partners reselling into multi-site clients need staging capacity behind them.

How to work this list

- **One company, one owner.** Before any outreach, confirm with James that the company is not already in active contact. Log what you learn.
- **Research before you reach out.** Read their services page. Your first sentence should prove you know what they actually do.

- **Specific beats generic.** "I saw you handle multi-location IT and office moves across DFW" opens doors. "We do IT staging" does not.
- **Qualify fast.** Use the six questions in Section 10. No multi-location deployment on a timeline means move on politely.
- **Submit, then follow up.** The moment a conversation turns real, submit it to deals@layeronestaging.com with the six fields. That is what protects your commission.

9. Why Layer One wins

- **One partner, dock to deployment-ready.** Gear ships to us. We receive, inventory, configure, test, tag, kit by site, store, and ship it out ready for their technicians. They stop coordinating five vendors.
- **Built for multi-location rollouts.** Kitting by site from a bill of materials, chain-of-custody tracking, and a signed QA checklist on every unit.
- **Problems caught early.** Dead-on-arrival gear is flagged with photo documentation in staging, so the customer can start the vendor return right away instead of discovering it at the site.
- **Straightforward pricing.** Published per-pallet rates and volume discounts on larger rollouts. No mystery math.
- **Full visibility.** Their own portal with live inventory, photos, shipment tracking, invoices, and messaging.
- **Specialists only.** Staging is all we do. Business to business only.

10. How to sell it

Sell like a helpful expert, not a pitch machine. Read what the buyer cares about. Make the case only when it fits. Never pressure, never recite a feature list, and never guess at pricing or timelines.

Qualify every prospect

Get these six answers on every serious conversation. They are also the required fields in your deal submission.

- Contact name and company
- Number of locations
- Device types and approximate quantities
- Services needed (receiving, configuration, kitting, storage, shipping)
- Timeline and hard deadlines
- Who signs and who pays

Talk tracks that work

- **Opening:** *"We help companies roll out equipment across multiple sites without tying up their own technicians in a warehouse. Do you have a deployment coming up where gear needs to arrive configured and ready?"*

- **Workflow walk-through:** *"Equipment ships to our facility in DFW. We receive and inventory it, capture serials, configure and test it, tag it, QA every unit, then kit by site and ship. Your techs unbox and install."*
- **Price question:** *"Receiving is \$12 a pallet, storage is \$30 a pallet a month, and DFW delivery is \$175 a pallet or \$30 a loose device. For a rollout your size, we build a custom project quote with volume discounts."*
- **Next step:** *"Want me to get a quote started for you? The fastest path is the form at layeronestaging.com/get-started, or I can take the details now and submit them for you."*

Common objections

Objection	Response
We stage in-house today.	Ask what it costs them in technician hours and space. Staging is all we do, so their techs stay billable.
Your price seems high.	Bring it back to the published per-pallet rates and the volume quote. Never discount on your own.
We already have a warehouse.	We are not selling space. We sell configured, kitted, deployment-ready output, with portal visibility.
Can you install it too?	No. We are the staging layer, not field services. Their techs install. Say it plainly and early.
How fast can you turn it?	Do not promise a date. Take the timeline and let the quote confirm it.

11. Your commission and how you get paid

Term	Detail
Role	Independent contractor (1099), commission only
Commission	10 percent of the full first project value for every new client you bring in
Example	A \$10,000 first project pays you \$1,000
When paid	After the customer payment clears. Not at signing, not at invoicing.
How paid	Bank transfer
Cap	No cap
Base salary	None. Straight commission.
Territory	DFW-focused, selling by phone and online. Self-generated opportunities.

Commissions are tracked in the Layer One Sales Commission Ledger. Columns cover rep, deal, project value, commission, customer paid date, status, and payout date. If you have a question about a specific deal or payout, give James your deal details and he will check the ledger and follow up. Sadie knows the rules but does not report live payout status.

Protect your commission

Submit every deal to deals@layeronestaging.com before someone else works the account. Your submission, with date and details, is the record that the client came from you.

12. Submitting a deal

Send every deal to **deals@layeronestaging.com**. Use subject line: **New deal: [Company name]**.

Include all six fields. Incomplete submissions slow down your own quote.

Field	What to include
1. Prospect contact	Full name, title if known, email, and phone
2. Company	Legal or trade name, and type of business
3. Locations	Number of sites and where they are
4. Equipment	Device types and approximate quantities, if known
5. Services needed	Receiving, configuration, kitting, storage, shipping, delivery
6. Timeline	Target ship or deployment dates, and any hard deadline

James qualifies the lead and runs the standard quote process. You stay in the loop on status. Do not quote a project price, delivery date, or MSA change to the prospect while you wait. If the prospect needs an answer fast, call James at (469) 537-4378.

Example submission

Subject: New deal: BrightPath Dental Group. Contact: Dana Ruiz, IT Manager, dana@brightpath.example, (214) 555-0148. Company: BrightPath Dental Group, 14 clinics across DFW. Equipment: about 60 workstations and 14 network switches, quantities to confirm. Services: receiving, configuration, asset tagging, kitting by clinic, DFW delivery. Timeline: first clinics live in about six weeks. Submitted by: [Your name].

13. Your onboarding checklist

Five steps take you from signed rep to paid commission. Steps 1 to 3 happen once, at the start.

Step	What happens	Done when
1. Agreement and W-9	Sign the Independent Contractor Agreement. James sends it, you sign and return it with a completed W-9.	Signed agreement and W-9 on file. Nothing starts before this.

Step	What happens	Done when
2. Payment setup	Provide bank details for commission transfers.	Bank transfer details confirmed.
3. Welcome packet	One email with this guide, access to Sadie, deal submission instructions, and a commission recap.	You have read this guide and talked to Sadie.
4. Submit deals	Email prospects to deals@layeronestaging.com with the six fields in Section 12.	Per deal. This becomes your routine.
5. Track and get paid	Your deals are logged in the commission ledger. You are paid 10 percent after the customer payment clears.	Per deal, by bank transfer.

14. Meet Sadie, your sales trainer

Sadie is your on-call sales trainer, built for Layer One reps only. She is warm, direct, and patient, and she knows this guide cold. Use her before live calls, not instead of them.

Ask Sadie to	Example
Answer a process question	"What happens right after a customer signs the MSA?"
Quiz you on the numbers	Quiz me on pricing. (Know this: \$12, \$30, \$175, \$30.)
Walk the workflow	"Make me say the 8 steps back to you."
Roleplay a prospect	"Play a skeptical MSP owner. Push back on price."
Prep for a meeting	"I have a call with a 20-site retailer tomorrow. What do I ask?"

James will send you the Sadie access link in your welcome packet. The link is for onboarded reps only. Do not share it publicly or forward it outside the sales team.

If Sadie does not know

She will tell you plainly and send you to James. That is by design. Never fill a gap Sadie leaves with a guess of your own.

15. Rules and guardrails

- **Never invent.** No made-up statistics, customer names, pricing, capabilities, addresses, or timelines. If you do not know, say so and get the answer.
- **Quote only Section 5.** The three published rates are the only numbers that leave your mouth. Everything else is a custom quote.

- **Never name the facility.** Say "our managed warehouse facility in the DFW area." Never name a facility provider, never hint the space is rented, and never quote a street address.
- **City level only.** "Dallas-Fort Worth area" or "Carrollton, Texas" is as specific as you get on location.
- **No timelines you cannot control.** "Usually within a business day" is fine for a quote turnaround. Anything else, check with James first.
- **No MSA negotiation.** Note the concern, submit the deal, let James handle terms.
- **We do not install.** If a prospect needs onsite installation or field technicians, say so early. We are the staging layer.
- **Submit before you celebrate.** A deal is not yours until it is in deals@layeronestaging.com with the six fields.

16. Quick reference card

Keep this page open during calls.

Item	Detail
One-liner	The operational layer between equipment procurement and field deployment.
Workflow	Receive, Inventory, Configure, Asset Tag, QA, Kit by Site, Document, Ship / Deliver
Receiving	\$12 per pallet
Storage	\$30 per pallet per month
DFW delivery	\$175 per pallet, or \$30 per loose device
Bigger rollouts	Custom project quote with volume discounts. Never quote it yourself.
Payment	No deposit. First payment due before any equipment is received.
After yes	Proposal email (MSA link + Stripe link), sign, pay, portal login, onboarding checklist, then gear ships to our dock.
Best fits	MSPs, integrators, rollout companies, retail and restaurant groups, multi-site organizations
Not a fit	Residential work, onsite installation, field technician dispatch
Submit a deal	deals@layeronestaging.com, six fields: contact, company, locations, equipment, services, timeline
Your commission	10 percent of first project value, bank transfer, after customer payment clears, no cap
Trainer	Sadie. Ask her anything in this guide. Link comes in your welcome packet.
Escalation	James Stogner, (469) 537-4378,

Final word

You do not need to know everything on day one. You need to know the workflow, the three prices, the one hard rule (no receiving before first payment clears), and where to send the deal. Sadie and James cover the rest. Go get them.
